7) Supersession Statement

The Reader's Orientation & Changelog (v1.0, February 4, 2026) combined orientation guidance and revision tracking within a single artifact. On February 11, 2026, revision tracking was formally separated into this Document Control & Revision History record to align with institutional publication discipline. No substantive conceptual modifications were made to framework content as part of this structural reorganization.

8) Governance Continuity Clause

Minor version increments (v1.1, v1.2, etc.) denote formatting clarifications, structural refinements, or non-substantive adjustments. Major version increments (v2.0, v3.0, etc.) denote substantive framework modifications. Pending publications are not recorded as Issued until formal release occurs. All future artifacts shall be incorporated into this control structure to preserve longitudinal traceability.
